DATA TRANSFER IN ANGULAR

- one issue w/ separate components → each component holds
  its own data

- THREE WAYS OF PASSING DATA

  1. PARENT TO DIRECT CHILD

     - use property binding to hand down data

  2. CHILD TO DIRECT PARENT

     - use event listeners .. when the parent "hears" an
       event, it gets passed some data

  3. UNRELATED COMPONENTS

     - use services to pass data between them
